

# Capability Statement

## Inventory Risk Assessment

Client: AGRI Risk Specialists for Seafresh Investments Oyster Farm

### REQUIREMENTS

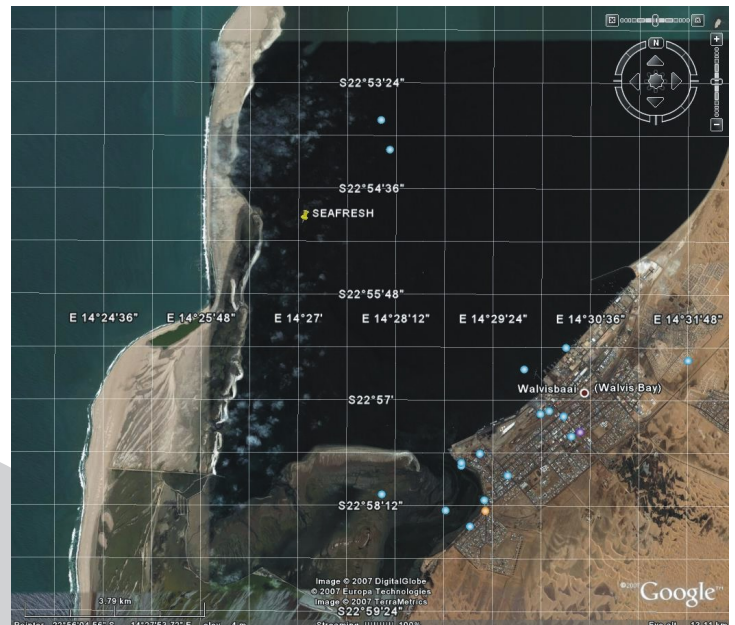

Perform an inventory risk assessment on the developing Seafresh Oyster Farm in Walvis Bay

### WORK DONE

- A site visit identified the primary potential risk events and gained information needed to conduct the risk assessment
- Risks were partitioned into the following categories:
  - ⇒ The farm system and maintenance
  - ⇒ Environment
  - ⇒ Disease/pathogens
- These categories encompassed subheadings such as Farm hygiene, pollution, storm wave effects, harmful algal blooms, low oxygen events and sulphur eruptions
- These risks were evaluated - the probability of the risk event occurring and its associated consequences were assessed and discussed

### OUTCOMES:

A risk profile for the Seafresh Oyster Farm was set out in a detailed report, enabling the client to impose management plans for the probability of a high risk event occurring.

**“risks were evaluated and the probability of the risk event occurring and its associated consequences were assessed”**
